mm inch

- Sealed to meet the combination process of automatic wave soldering and cleaning needs
- Latching types available
- High switching capacity and high sensitivity in subminiature size

150 mW pick-up, 8 A inrush capacity: 51 A for 1a1b
35 A for 2a

- High shock and vibration resistance Shock: 20 G
Vibration: $\mathbf{1 0}$ to $\mathbf{5 5 ~ H z}$ at double amplitude of $\mathbf{2 ~ m m}$

## Precautions for use (socket)

1. PC board mounting method

PC board pattern

The terminal configuration is symmetrical on the left and right, so an arrow mark $g$ is stamped on the socket to prevent mis-insertion. We recommend printing the same arrow mark $g$ on the component mounting side (side opposite from pattern) of the PC board. In this case, the terminal configuration becomes the terminal nos. noted near the drilling holes.
2. Chassis cutout

Chassis cutting dimensions

If the chassis hole is punched with a press, set so the release R on the front side (A side).
The range for chassis thickness is 0.6 to 2.2 mm . 024 to .087 inch.
3. Relay mounting and removal
(1) Align the directions of the relay and socket.

(2) Insert the relay all the way in, so it is securely in place.

(3) Press the part indicated by A in the B direction, and fasten by placing the hook on the relay.

(4). When removing the relay, completely release the hooks on both sides and pull the relay out.
